

PRODUCED WATER EXCURSION PACKAGES

MAINTAINING PRODUCTION OFFSHORE WITHOUT INTERRUPTION

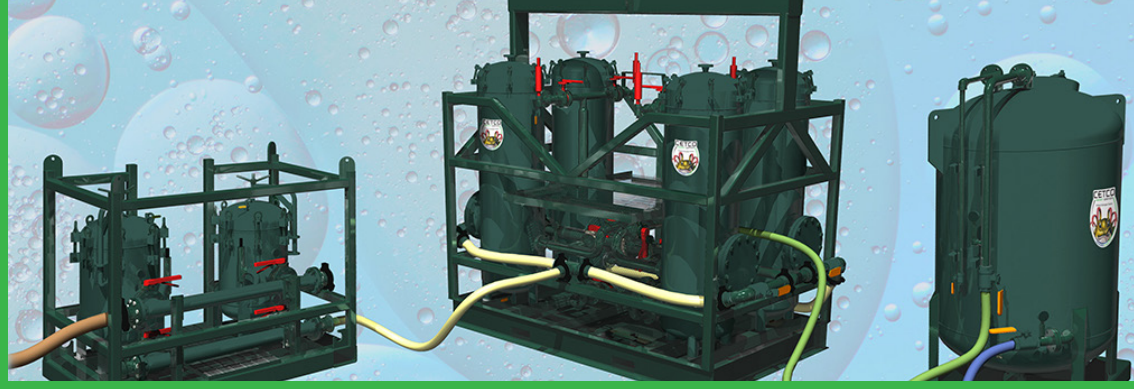

FPSO Floating Production Storage and Offloading, facilities face unique challenges for water treatment due to remote locations, deepwater, weather movement and practices such as storage of produced water in slop/cargo tanks. In addition, environmental regulations for overboard discharge or for re-injection and are becoming more stringent every year, creating the need for reliable, complex water treatment systems. As the industry leader in water treatment solutions for the offshore oil & gas market, we offer a comprehensive program for short, medium and long-term remediation to help customers maintain production without interruption. Our program includes field surveying, trouble-shooting and remediation technologies supported by equipment tailored to the specific needs of each customer.

APPLICATIONS

- Treat production systems during periods of excursion

FEATURES & BENEFITS

- Built on Best Environmental Practice & Best Available Technology
- State-of-the-art water analyzers
- Increased production rates
- Reduced downtime
- Increased revenue

IN-HOUSE SERVICES AVAILABLE ON CETCO PROJECTS

CETCO provides additional in-house Engineering, Project Management, Research and Development services for all CETCO Customer Projects.

ENGINEERING & PROJECT MANAGEMENT

CETCO experts, professionally certified (P.E.) and certified (PMP), deliver tailored engineering services, technical expertise, and project management for CETCO projects to enhance project performance.

ENGINEERED TO EXCEL
